

ENVIRONMENTAL LABELLING OF PACKAGING

In accordance with Legislative Decree 116/2020 relating to environmental labeling, Chrysos guarantees complete transparency in the management of packaging materials. Each element is correctly identified by codes that facilitate collection, recovery, recycling and reuse activities, facilitating those involved in the waste management chain.

This practice, in addition to being a regulatory obligation, represents a concrete commitment to the promotion of a shared environmental culture, which favors virtuous behavior along the entire value chain.
